**CTC Plastics Introduces Two New Products Containing Lehigh Technologies'
Sustainable, Micronized Rubber Powder**

New pallets and resin compounds made from 100% recycled materials reduce costs, maintains performance

DAYTON, Ohio – October 24, 2012 – CTC Plastics will unveil pallets and resin compounds made from 100% recycled materials at [Pack Expo](#) in Chicago, October 28 – 31. The recycled materials perform the same as virgin materials but cost less, helping CTC Plastics' customers reach their sustainability, cost and performance goals. CTC Plastics has incorporated [Lehigh Technologies'](#) micronized rubber powder (MRP), a sustainable, lower-cost alternative made from end-of life tire material.

"CTC Plastics use of Lehigh's micronized rubber powder is another example of applying technology to find productive uses of end-of-life tire material to reduce raw material costs and meet customer demand," said Alan Barton, CEO Lehigh Technologies. "Their new pallets and resins allow customers to buy a cost competitive, sustainable product without sacrificing performance."

"We're really excited about these new products. Together we have created a competitive product made from an innovative choice of raw materials," remarked John Dennis, CTC Plastics Chief Operating Officer. "These sustainable pallets, made from 100% recycled material just like all of our products, are making it impossible for companies to stick with virgin plastics based on unbeatable cost and performance. We also guarantee to buy back damaged or end of life pallets to be reused in the next generation of plastic products."

Pallets made with Lehigh's MRP can be purchased from CTC's pallet line. Micronized rubber resin compounds can be purchased as-is or to be used in a CTC custom molded product.

CTC Plastics

CTC Plastics vertically integrates to offer plastic products starting from material testing through distribution. CTC excels at custom and proprietary molding and resin. Founded in 1994, CTC is recognized for being committed to excellence, quality and the environment. Our ISO/IEC 17025 certified lab assures quality and

pure ingredients, and confidence in the consistency and compliance with your exact specifications. For more information, visit www.CTCPlastics.com.

CTC Plastics is a wholly owned subsidiary of Soin International LLC, a private multi-national holding company that provides strategic management, administrative systems, and financial support to a diverse array of worldwide subsidiaries and affiliates.
